

ADVANTAGES

- Easy and fast installation by using the existing roller frames
 - » idlers out.
 - » adapter in.
 - » slide rails in.
- Prevents belt sagging at the transfer.
- Reduces significantly maintenance time and cost.
- Protects and extends belt service life.
- 100% straight belt support due to the sliding bars.
- Increased side sealing effect at the transfer chute.
- Perfect results in combination with the **AIRSCRAPE®** (not included in delivery).

FULLY INTEGRATES WITH AIRSCRAPE

SureSupport protects and prevents falling material from damaging the belt and significantly improves the overall belt load.

SUREsupport

HIGH-PERFORMANCE BELT SUPPORT AT CRITICAL TRANSFER POINTS

SUREsupport

HIGH-PERFORMANCE BELT SUPPORT AT CRITICAL TRANSFER POINTS

IMPROVES MATERIAL TAKE-UP

100% STRAIGHT BELT SUPPORT

PROTECTS AND EXTENDS BELT SERVICE LIFE

INCREASES SIDE SEALING EFFECT AT THE TRANSFER CHUTE

VERY LOW MAINTENANCE REQUIRED

PROMOTES CORRECT BELT TRACKING AND PREVENTS SPILLAGE

The full force of falling bulk material causes a high belt load in the transfer area, this increases material, energy and maintenance costs. SureSupport reinforces the belt and prevents belt sag caused by the impact energy of falling/conveyed materials. This supports the side sealing function and prevents spillage at the transfer point. The specially developed sliding surfaces ensure smooth and straight belt tracking.

EASY INSTALLATION BY REPLACING THE WING ROLLER

INSTALLATION POSITION

WITHOUT BELT SUPPORT

WITH SURESUPPORT

PRODUCTIVITY & TRANSFER POINTS FULLY OPTIMISED

Without ample belt support, the belt surrenders to the high impact load. Gradually the belt starts to degrade, making the conveying function and productivity more difficult, inefficient, and costly. Belt sag can arise, which can potentially lead to OHS hazards such as dust emissions and material spillage.

SureSupport greatly reduces the impact load on the material and supports the belt in its run. The sliding rails prevent belt damage, and the tightness of the transfer is effectively increased with the use of a combination skirting and sealing system.
